# EECS 1012. Lab 2: HTML and CSS

#### A. IMPORTANT REMINDERS

- 1) You should attend your own lab session (the one you are enrolled in). If you need to change your lab enrollment, you should go to the department. Instructors or TAs cannot change your enrollment. TAs are available via Zoom to help you during your lab hours.
- 2) You are required to pass the pre-lab mini quiz posted on eClass not later than the first 10 minutes of your lab time. You have 3 attempts; and you need at least 75% to pass. However, each time you may get some different questions. In addition to reading these instructions first, make sure you do not start the pre-lab quiz unless you have done the pre-lab tasks (Section B below of this document). Failing the pre-lab mini quiz is equal to failing the whole lab.
- 3) You can also have your work verified and graded during the lab sessions. Feel free to signal a TA for help if you stuck on any of the steps below. Yet, note that TAs would need to help other students too.
- 4) Submit your lab work in eClass before the deadline. To pass this lab, your grade for it should be at least 70%.

**Important note:** this lab is more complex and time consuming compared to the previous lab; you need to attempt to complete as much of the lab as possible before attending your lab session. We do not accept late submissions. Email submissions receive a zero.

#### B. IMPORTANT PRE-LAB WORKS YOU NEED TO DO BEFORE GOING TO THE LAB

- 1) Download this lab description and the associated files and read it completely. Save the supplied files in a separate folder (directory) on your computer, name that folder Lab02.
- 2) Follow the following link for more understanding of CSS:
  - Demo: <a href="https://www.w3schools.com/css/css">https://www.w3schools.com/css/css</a> intro.asp
  - Color picker: <a href="https://www.w3schools.com/colors/colors">https://www.w3schools.com/colors/colors</a> picker.asp
  - Complete list of font properties https://www.w3schools.com/cssref/pr font font.asp
  - Video on fonts: https://www.youtube.com/watch?v=yIVPuSyepX0
  - Complete list of text properties https://www.w3schools.com/css/css text.asp
  - CSS Box Model: https://www.w3schools.com/css/css boxmodel.asp
  - HTML layout: https://www.w3schools.com/html/html layout.asp

#### C. GOALS/OUTCOMES FOR LAB

- 1) To learn how to change the presentation of an HTML document using CSS,
- 2) To help you analyze an HTML page and decide how to modify it for a desired appearance using CSS.

## D. TASKS

- 1) You are provided a simple diary.html document and corresponding images. Your job will be to adjust the presentation of the HTML content and structure in an iterative (step-by-step) fashion.
- 2) You will generate five HTML and CSS files in this process. When you decide to demo your work to the TA, please have each HTML file open in a different tab of your browser, so you can show the progression.
- 3) See the following pages for details on how to modify your HTML and CSS files.

#### E. SUBMISSIONS

1) Manual verification by a TA

You may want to have your TA verifying your lab before submission. The TA will look at your various files in their progression. The TA may also ask you to make minor modifications to the lab to demonstrate your knowledge of the materials. The TA can then record your grade in the system.

#### 2) eClass submission

You will see an assignment submission link on eClass. Create a folder named "Lab02" (if you haven't done so already) and copy all of your lab materials inside (image folder, diary\_ex{1,2,3,4,5}.html and diary\_ex{1,2,3,4,5}.css). This folder should be compressed (zip or tar.gz) and the compressed file submitted.

## F. STARTING POINT: diary.html and images in the image folder.

You are given the following HTML file and associated images. This file has no CSS file. The lab task is to adjust the *presentation* of this HTML document by modifying the HTML slightly at each iteration and creating associated CSS files. We will do this step by step so you can see the process.

# Reading Diary

#### The books I've read recently and my (and Wikipedia's) thoughts about them

#### Winnie-the-Pooh by A. A. Milne

In the Milne books, Pooh is naive and slow-witted, but he is also friendly, thoughtful and steadfast. Although he and his friends agree that he is "a bear of very little brain," Pooh is occasionally acknowledged to have a clever idea, usually driven by common sense.

You can find this book at Toronto Public Library.

#### The Handmaid's Tale by Margaret Atwood

After a staged attack that killed the President of the United States and most of Congress, a radical political group called the "Sons of Jacob" used quasi-Christian ideology to launch a revolution. The United States Constitution was suspended, newspapers were censored, and what was formerly the United States of America was changed into a military dictatorship known as the Republic of Gilead.

You can find this book at Toronto Public Library.

### Ghost Knight by Cornelia Funke

Jon's desperate quest to find out why the ghosts are after him leads him to the mystery of a centuries-old murder. Meanwhile, he is still pursued by the vengeful ghosts, so with the help of a new friend, Ella, he summons a noble ghost — Sir William Longspee, the Ghost Knight of the title — to protect him. They finally uncover a complicated truth and right a grievous wrong.

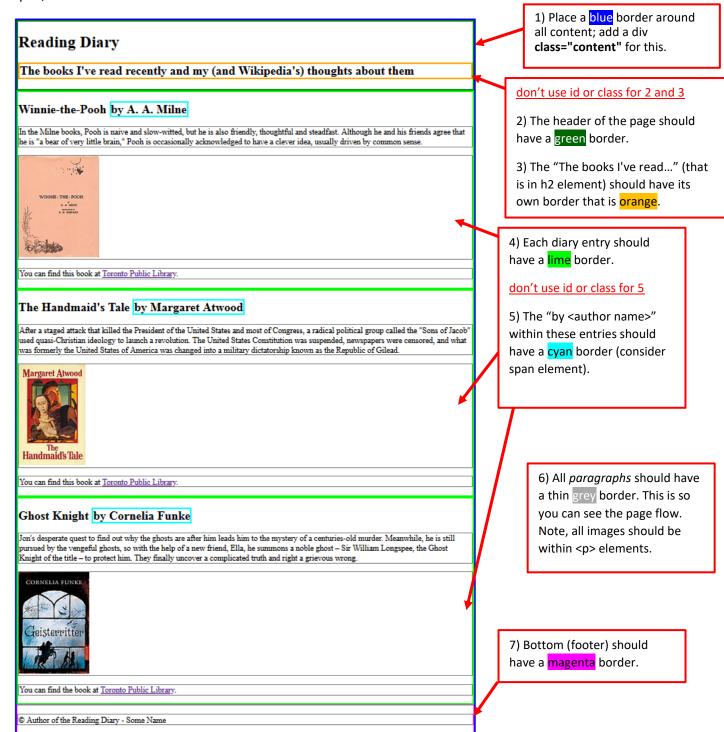

You can find the book at Toronto Public Library.

© Author of the Reading Diary - Some Name

## Exercise 1: (CREATE: diary\_ex1.html and diary\_ex1.css)

Try to match the output below as closely as possible – see the annotation for details. This exercise is to set up the basic HTML structure to assist in further modification. The associated CSS is to help you see how the item flow in the document. You need to organize the HTML content by adding in ids, classes, and associate these with <spans> and various <div>. This requires you to modify the HTML page to add in these new elements. In your CSS, create the corresponding *selectors* to set the borders to have a color and border (make it at least 2 pixels thick). The intent of this exercise is to to help you visualize the layout of your sections created using div, span, and classes.

## Exercise 2: (CREATE: diary ex2.html and diary ex2.css by copying from Exercise 1.)

NOTE: The only change to diary ex2.html is that it links to diary ex2.css instead of diary ex1.css.

- i) Modify the CSS based on the annotations on the right.
- ii) Pay attention to the difference between margin and padding.
- iii) Use the rgb(-,-,-); notation for the color property in your CSS.

1) Make the body of the HTML page to have a background of "paper.png" (provided).

Add a left and right margin of 10% to all of the main content.

2) Change the div around all the elements (the one with a blue border) to have an ivory

3) Change all the entries (all items with a lime border) to have the following background

R=236, G=236, B=245

You should also add padding of 15px and a top-margin of 10px.

margin)

background.

color:

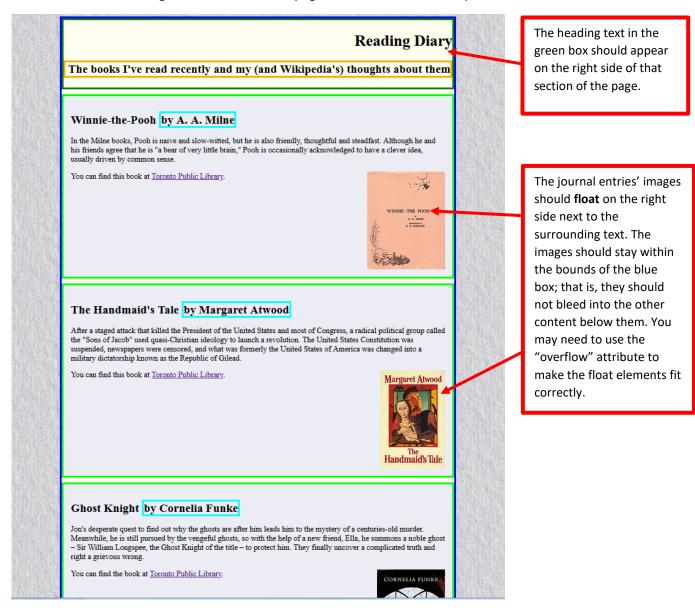

(Note the difference between padding and

4) comment out paragraph borders.

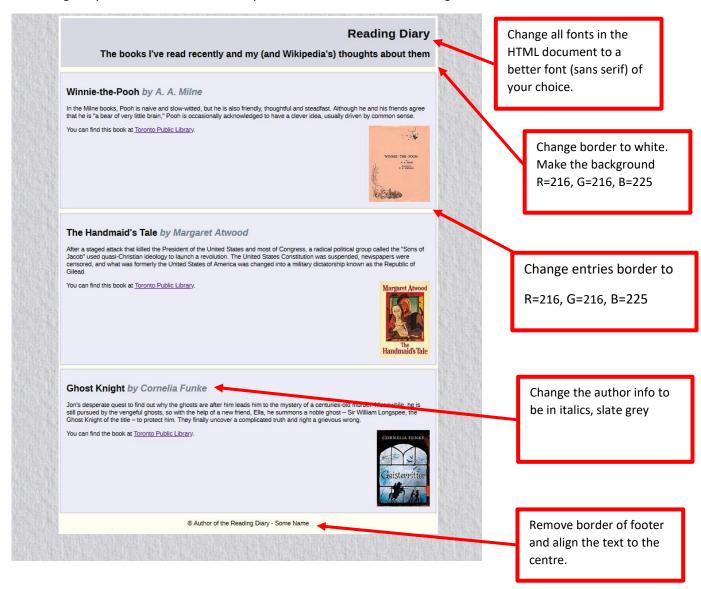

## Exercise 3: (CREATE: diary ex3.html and diary ex3.css by copying from Exercise 2.)

This exercise will change the alignment of elements using float, overflow, and alignment attributes in the CSS. This should be possible without editing the main HTML page (other than the link to the new CSS). See the annotations for the changes to make. Your webpage should look as close as possible to below.

# Exercise 4: (CREATE: diary\_ex4.html and diary\_ex4.css by copying from Exercise 3.)

This exercise will finish the webpage. This last iteration makes small cosmetic adjustments to the border and colors. Again, you will not need to modify the HTML file other than linking in the new CSS.

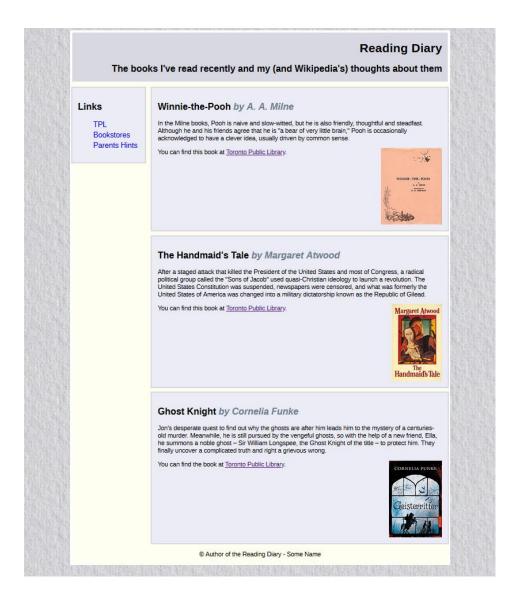

#### **Exercise 5 (advanced layout):**

This last exercise is to modify your HTML and CSS to add in a *nav section* (LINKS) to your website or width 196px. The colour of this section can be the same as the entries (that is, Book 1, Book 2, Book 3, ... ); hence, don't rewrite the styling just use the one for entries. Note that you'll have to consider how to make the section such that the entries adjust correctly as shown below. Try to make your webpage look as close as possible to the one below.

In the navigation section, add the following HTML code:

```
<h2>Links</h2>

<a href="https://www.torontopubliclibrary.ca/">TPL</a>
<a href="https://www.blogto.com/bookstores/">Bookstores</a>
<a href="https://www.boredpanda.com/parents-share-tips-tricks-to-make-kids-read/">Parents Hints</a>
```

# G. AFTER-LAB TASKS (THIS PART WILL NOT BE GRADED)

Revisit each of the new HTML tags as well as CSS statements and properties that you used them in this lab via <a href="https://www.w3schools.com/">https://www.w3schools.com/</a> and explore more features about them.
